一般社団法人 触媒学会

Catalysis Society of Japan

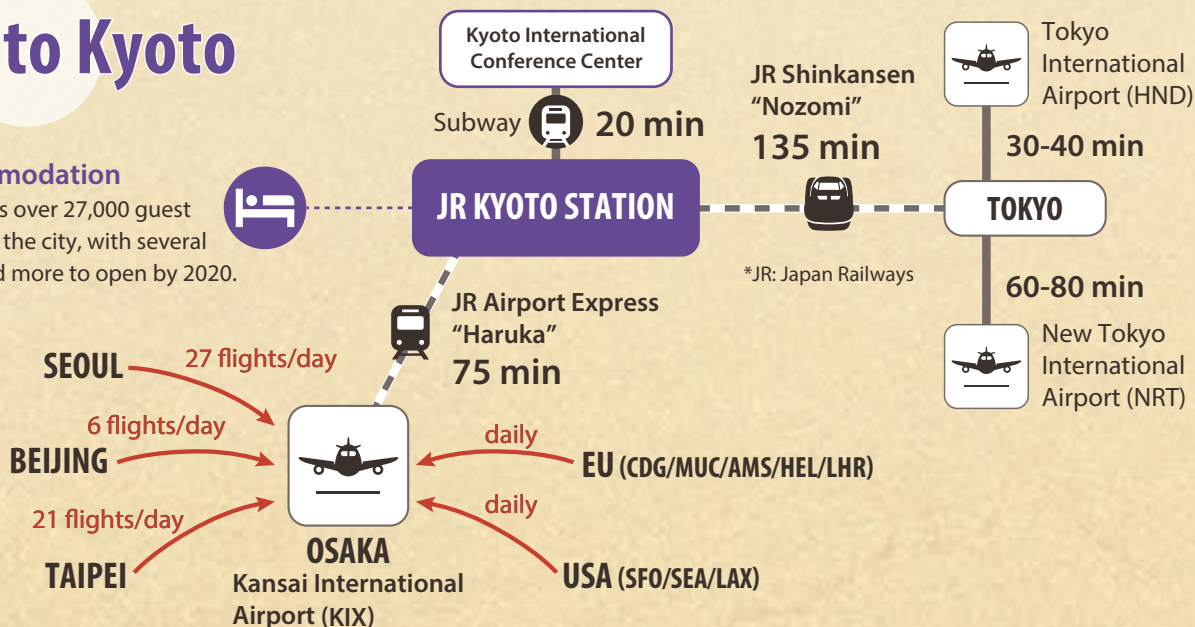

The Catalysis Society of Japan (CATSJ) was founded in 1958 to promote the advancement of the catalytic science and technology. To pursue our missions, the CATSJ holds various academic conferences and seminars, and publishes journals and books. Through activities of the CATSJ, our members and other individuals have discussion to exchange ideas at various scientific meetings, participate in educational courses, and promote international and interdisciplinary collaborations. One of the largest CATSJ events is Tokyo Conference on Advanced Catalytic Science and Technology (TOCAT), which is held every 4 year since 1990. The 8th TOCAT in 2018 has finished with a great success, accommodating over 1000 participants in Yokohama from all over the world. We are delighted to keep contributing to the advancement and innovation of our society through our activities.

Access to Kyoto

Accommodation

Kyoto has over 27,000 guest rooms in the city, with several thousand more to open by 2020.

June in Kyoto

WEATHER

Kyoto in June is usually warm but not hot. There are many sunny days until rainy season begins.

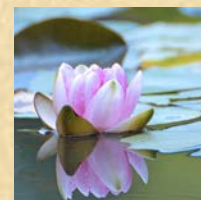

Temperature

Average high: 28 / 82 (°C/°F)

Average low: 19 / 67 (°C/°F)

Hydrangea, a flower that symbolizes Japan's early summer, brightens up Kyoto with variety of colors.
